Present Position

- 2012- Ph.D. student in Physics at The Institute of Mathematical Sciences, Chennai, India
Supervisor Professor Ronojoy Adhikari
- Description Currently, I am working in soft condensed matter physics. In particular, my work involves the study of hydrodynamic interactions in systems of active colloids. We use the boundary integral formulation of the Stokes equation to analytically obtain the equations of motion of these colloids. We then use these equations of motion to perform computer simulations of active colloids in various geometries. We find excellent agreements of our theory with experiments on synthetic active colloids and microorganisms.
